

State-of-the-Art Hako-Med Therapy for Chronic Pain and Peripheral Neuropathy

High Country Pain Relief is the first to bring this State-of-the-Art Hako-Med Therapy to Boone NC!

This equipment has been engineered for the physician involved in clinical pain management and neuropathy. The Hako-Med delivers electronic frequencies that can block the pain signal and heal nerves without painful needle injections or dangerous medications.

The HakoMed ProELEC DT 2000 was developed in Germany by Dr. Hansjurgens. The HakoMed makes use of Horizontal Therapy or (*the combination of specific bioelectric effects and specific biochemical effects*) in the same treatment area, at the same time!

Before the invention of **Horizontal Therapy**, such a combination of this therapeutic mechanism of action was impossible to achieve! Contact our experienced team to find out how our [Boone NC chiropractor](#) can help you!

With positive results over the last three decades, Dr. Derrick Denman, D.C., PA uses this innovative medical device specializing in the field of bioelectric medicine. If you've explored other healthcare solutions (such as surgery, medication, or regular chiropractic care) for your chronic degenerative health condition and haven't seen any success, Dr. Denman at High Country Pain Relief is the Alternative doctor you need to see.

The Hako-Med / Horizontal Therapy has been a mainstay to his carefully curated therapies as an alternative treatment option for **Chronic Pain** and **Peripheral Neuropathy**.

Most pain patients experience instant results, which over time, may be cumulative. The Hako-Med delivers immediate positive results on difficult to treat conditions and is safe, effective, and FDA approved.

HT therapy is **non-invasive** and very relaxing and delivers real results for patients with no negative side-effects and no opioids addictions. Most patients experience a significant improvement of their pain condition(s) over time, opening up the possibility of discontinuing dangerous and costly drugs, with the approval of their medical doctor, of course.

Dr. Denman has seen drastic improvement among his most difficult patients using the Hako-Med Therapy. Some of the benefits of the Hako-Med Therapy that have been documented with clinical research are:

- Stimulation of peripheral nerves for the purpose of providing pain relief
- Simulate nerves for muscle re-education
- Help with the management and symptomatic relief for Neuropathy and Chronic Pain
- Help with the relaxation of muscle spasms

All cells communicate in both a bioelectric and a biochemical manner. **When this communication is impaired, pain and disease can occur and normal function is lost.** The Hako-Med Therapy is the only one that communicates in a bioelectric and biochemical capacity in the same treatment session. This creates a broad-spectrum physiological effect within a 30 minute session time.

Dr. Derrick Denman, D.C., PA has successfully treated many chronic conditions using the Hako-Med Therapy, including:

- Chronic Back and Neck Pain
- Sciatica
- Knee Pain
- Fibromyalgia
- Foot Pain
- Peripheral Neuropathy

BENEFITS OF HORIZONTAL THERAPY IN BOONE, NC

- Increased blood circulation
- Pain relief
- Anti-inflammatory action
- Nerve cell regeneration
- Muscle stimulation

Is Horizontal Therapy Safe?

The bioelectrical currents used in this therapy have been rigorously tested and are safe for the human body. During the therapy, the current is painless, and often barely felt. Skin is not pierced during therapy, and the treatment is non-surgical and non-pharmaceutical. However, some conditions may NOT be appropriate for Hako-Med Horizontal Therapy. **These conditions include:**

- Areas of infection
- Blood clots
- Individuals with Pacemakers
- Cancer
- Abnormal cardiac rhythms

WHAT TO EXPECT

Leads and adhesive pads are placed around the area to be treated.

The therapy technician will program the HakoMed and begin to increase the intensity output of the leads. At this point, you'll want to tell your technician when you begin to feel a tingling sensation so they can set your threshold level for treatment. **It is important to note that everyone experiences this treatment differently**, and based on the amount of degeneration in your nerves, you may not feel anything at all. This does not mean the therapy is not working.

Even without the physical sensation from the leads of the HakoMed machine, your nerves are receiving the frequencies during therapy.

Depending on which protocol you are set up for, you may go through periods during the treatment where you feel the sensation more or less as different frequencies are conducted through the leads and into your body. This is normal. If at any time during the treatment you feel it is too intense, you may ask the technician to stop or decrease the intensity.

Upon completion of the 30 minute session, the technician will remove each lead and the adhesive pads from the area of complaint, allowing you to get on with your day feeling better!

How many treatments will I need? Depending on your condition, the number of treatments varies. Generally, most individuals receive ten to twenty treatments one to two times per week. Treatment sessions usually take 30 minutes. During a session, multiple body parts can be treated.
